Agile Business Devlopment & Strategy

Cillium

Mr. Bennie Herring II

I want to thank you for sharing the information about Bioscience Americas with me and I am grateful for the opportunity to provide to you our team's solutions based recommendations for this amazing project. CILLIUM and our partners provide a diverse base of solutions that are designed to improve operational efficiencies, cost containments, information gathering/distribution/interpretation, revenue generation assistance and forward thinking interconnected innovation. Our team is comprised of strategic partners that can provide individual solutions or a combined solution for better economies of efficiencies.

After reviewing the information you provided, we believe that we can provide assistance and support through a series of solutions that our team will provide and possible manage on a global basis. These services can be included to support your strategic partners like GIOSTAR and their 10 locations as well as the locations you are developing in the Americas.

The first solution is in the area of data collection and hosting. There will be a need for large amounts of information that needs to gathered, accessed and stored for the research, the doctors, the patients, the families and the medical community served. Our partner BCR can house or build the facility that will house the data storage and connectivity systems that will be required for Bioscience Americas. These can be locations near each facility throughout the world or strategically located facilities that serve multi locations and provide redundancies and backups.

The next solution is the massive amount of software design to provide the researchers, doctors, patients, families and medical communities their specific information. This software must also be interactive as to allow certain amounts of information to flow

www.cillium.com

between these different groups with protections to prevent improper information sharing between groups. This can be provided through our partners Meridian and Cillium.

Depending on how each facility is designed, there may be a need to connect facilities on the same campus or in close proximity. Metroware has the latest in microware/laser technology which will allow for bandwidth installation and scalability.

CILLIUM provides the solutions in the development and deployment in green energy technologies. Our energy management reduces consumption of electrical usage be 20% on existing facilities and 15% on newly constructions facilities. We also provide energy production systems that include solar, wind, wave and biomass systems that all renewable clean energy solutions.

The combined solutions will provide Bioscience Americas with operational efficiencies and cost containment that will improve quality of services at more controllable cost.

Additionally the development of a social media solution will provide revenue generation through advertising. This social media will be multi level offering that will provide the ability to establish information sharing between researchers, doctors, patients, family members and the medical community. It will consist of support groups for the patient and families, access to research information for the medical professionals and information exchange to other groups that you decide to allow the access. Certain information could be leveraged for government funds, commercial companies or non profit support. Education services are essential to the continued improvements of the quality of life.

Another suggestion is that you may wish to consider making your medical facilities more like a resort so that the family members that attend the treatments with their loved ones have a more relaxed environment while supporting their family member. This could also be a revenue generator for Bioscience Americas. Why should local hotels get that revenue when you could?

Below is some information about CILLIUM and our partners:

CILLIUM Communication Services Division

CILLIUM has the skill to design and sell services ranging from residential to commercial, business to consumer, business to business, business to government, government to business, government to government, government to residential and every type of ecommerce applications. CILLIUM can provide web design, web hosting, servers, disaster recovery or any aspect of communications our clients may require.

Our Strategic include several e-commerce web based developers, fiber optic and connector suppliers, web hosting and development companies, market development consultants and sales training facilitators

CILLIUM Green Technologies Division

CILLIUM Energy Management systems specialize in providing sustainable energy management products for industrial mechanical devices and commercial electrical systems. Our products are guaranteed to reduce your electrical consumption by at least 20% on all circuits we manage. All systems are fully tested for safety and reliability and have an average service life of up to 15 years. Our goal is to provide our clients a twenty four to thirty six month Return on Investment. Our intelligent energy efficiency technologies will greatly improve control of property power resources and virtually eliminate energy waste. The reduction of energy waste means less expense for energy purchases and dollars saved contributes directly to earnings per share. Our systems are also designed to be maintenance free and require little human monitoring. CILLIUM will analyze each site's energy consumption and utility expenditures and determine the best solutions. The solutions are unique to each location. They are guaranteed safe and effective and are fully protected through a built-in bypass function.

Business Continuity Resources LLC will ensure that your business continuity plan is secured through interruptions of any kind: power failures, IT system crashes, natural disasters, supply chain problems and more. Business continuity is the activity performed by an organization to ensure that critical business functions will be available to customers, suppliers, regulators, and other entities that must have access to those functions. This includes activities like, but not limited to project management, system backups, change control, and help desk. Business continuity is not implemented at the time of a disaster; it refers to those activities performed daily to maintain service, consistency, and recoverability. The foundation of business continuity is the standards, program development, and supporting policies, guidelines, and procedures needed to ensure business continues without interruption, regardless of adverse circumstances or events. All system design, implementation, support, and maintenance must be based on this foundation in order to achieve business continuity, disaster recovery or in some cases, system support.

Business continuity is sometimes confused with disaster recovery, but they are separate entities. Disaster Recovery is a small subset of business continuity. It is also sometimes confused with Work Area Recovery (due to loss of the physical building which the business is conducted within); which is but a part of business continuity. Whatever your case may be Business Continuity Resources will design a comprehensive roadmap with the clearly defined procedures, checked by proactive control methods that will ensure the right outcome in times of your company's distress.

The size and complexity of data centers have increased dramatically over the past decade due to new technologies, the explosion of data, and heightened security concerns. However, as today's data centers grow in size and complexity, so do the challenges of project management.

www.cillium.com

- Coordinating relationships among the Data Center facility, network provider and customer.
- Assignment of a dedicated Project Manager.
- Technical assessment of solution.
- Development of implementation schedules.
- Monitor all aspects of implementation.
- Post-implementation audit.
- Customer care and billing support.

With today's resource limitations, IT professionals often lack the resources to fully manage complex projects involving multiple vendors, departments and disciplines. BCR provides a consistent management solution for all project issues and areas.

When Business Continuity Resources (BCR) takes responsibility for part or all of your data center projects, a full-time and dedicated Project Manager (PM) assembles a multi-disciplined team of partners and advisors to collaborate on every aspect of project management, from initial requirements to post-implementation audits. The BCR Project Manager will provide you with a single, constant, anchored point of contact for all issues and areas, including work by subcontractors. BCR provides a variety of Project Management solutions to manage data center projects, regardless of size or complexity. We can augment in-house management staff and even help you set up your own Project Management Team. In addition, the approach is based on Standard Operating Procedures (SOP) and provides organizations the structure they need to both standardize project management practices and facilitate the marriage among IT, facilities, and the business.

With BCR's PMA solutions, you will have a single vendor for all project and change management, providing you with

- A solution that is fully integrated with DCLM, a holistic, comprehensive, strategic view of the Data Center.
- Support for standard Project Management Institute (PMI) focus areas.
- Full responsibility for all project reporting and tracking.
- Assurance that all projects are executed consistently.
- Direct links between projects and the company's strategic and operating plans.
- Change management at one point instead of many.
- Combined internal and external checks and balances.

Enterprises today are counting on their IT departments to utilize effective technology in an effort to gain a competitive edge within their marketplace. Traditional business applications have always been very complicated and expensive. The amount and variety of hardware and software required to run them are daunting. You need a whole team of experts to install, configure, test, run, secure, and update them. When you multiply this effort across dozens or hundreds of apps, it's easy to see why companies with the best IT departments aren't getting the apps they need.

www.cillium.com

With cloud computing, you eliminate those headaches because you're not managing hardware and software—that's the responsibility of an experienced vendor. The shared infrastructure means it works like a utility: You only pay for what you need, upgrades are automatic, and scaling up or down is easy. Cloud-based apps can be up and running in days or weeks, and they cost less. With a cloud app, you just open a browser, log in, customize the app, and start using it. Sounds Simple…. Right..

BCR's abundant experience in the co-location data center market place affords us extensive knowledge and understanding of the various available retail collocation solutions for small to enterprise class customers. We have worked directly for some of the largest international and nationally owned companies with experience in the fields of sales, channels, and service and support. BCR insures your company is placed in a financially sound and stable data center environment. Our industry experience commands the most favorable terms and competitive market rates on behalf of our customers.

With relationships in North America, Europe, Asia, Singapore, Hong Kong, and India, BCR has the right data center environment for you; half cabinet, full cage, private facility, or a "green field" build.

Meridian Power Group is an IT Consulting and Software Solutions Firm. Our product may be technical, but our approach is personal. Our pathway to delivering cutting edge people and software technology winds through the offices of leaders and managers of every company we work with. Our consulting team builds on a thorough GAP analysis and review of industry best practices. We talk to as many people as we can so we can design tech solutions that work throughout the industry.

We are enterprise architects helping your firm lay a foundation of scalable technology infrastructure. We plan, design, develop, test and implement applications. We manage data centers and networks. We provide tech support Help Desk services and help you to staff up for internal project initiatives.

In short, we are a single resource providing you with virtually every solution and service you might need in the area of information technology. At Meridian Power Group our success is measured by your performance. The gains you make in productivity and efficiency from implementing our products and utilizing our services are what drive us. Our mission is to help you meet current and future goals by providing transformative technology, competent and professional consultants.

We plan, design, build, test, implement and seamlessly integrate applications across the enterprise. We are laser focused on defect prevention and quality. We stick like glue to time lines and budgets.

We offer 24/7 support for applications, systems and databases helping you to boost productivity and minimize downtime. We provide all levels of support services for

proprietary and off-the-shelf applications delivering app stabilization, bug fixes, upgrades, patches, tune-ups and on-going enhancements.

Our approach to application migration is highly structured. The mission is to ensure reliability, maintain integrity, minimize risk and maximize efficiency. We are experienced in all major technologies and architectures across multiple platforms. Critical applications are moved seamlessly with minimal downtime at fixed cost. Security is paramount with disaster recovery systems built into every environment. Schedules are adhered to and your applications are ported only after every step in the plan of action has been addressed.

Meridian Power Group works with our clients to develop and implement transformation technology across the industry. Our Software Solutions improve operations and profitability. We provide Software Solutions, help desk recruiting and management for IT infrastructure. Our team of over 100 skilled programmers, managers and architects are ready to help you with all of your business needs.

- Recruitment: Rapid internal team build-up for all your IT initiatives
- Software Applications: Planning, design, development, testing and implementation
- Operational Support: Data management and support for enterprise systems
- Employees: Programmers and Consultants for all IT platforms

We provide Software Application Development, Migration, Customization, Maintenance, Re-engineering and Productivity Enhancement. Meridian Power Group, Inc. does it all. The most important thing we give you is the confidence that comes from knowing your project is in the right hands.

Nevis/Cloud eliminates the need for a large initial software investment, installation, server purchase, and maintenance, update management. Since the anticipated revenue stream is a low monthly fee, end users will be able to more easily afford to automate and upgrade to a more robust functional system.

Nevis/Cloud presents income opportunities for IBM, Meridian Power Group, and software resellers throughout the US. Several factors have fallen into place over the last few years that makes this opportunity very exciting. Now that internet access is pervasive and reliable, people no longer have to purchase software. (i.e.. Google apps). This eliminates the need for updates, initial purchase, and installation. Nevis/Cloud is extending this to a full function accounting and mission critical business application. We believe that we can easily penetrate several types of customers. 1. Small to medium sized businesses that are running older hardware and are now faced with upgrading to a new expensive box. 2. Businesses who are looking to reduce software support costs, and infrastructure investments. 3. Businesses who are looking to improve their business efficiency with a more functional system.
